

A colorful illustration of three brown monkeys in a jungle. The monkey on the left is looking to the side with its hand near its ear. The middle monkey is looking forward with its hands near its mouth. The monkey on the right is covering its eyes with its hands. The background is filled with stylized green and blue foliage and flowers.

Attention Lecture 4

Individual differences

- What do we know?
 - You're going to be disappointed

Demonstration: studying humans requires getting lots of data

- Data is noisy
- Need multiple humans or lots of trials

Time perception mini-study

Give your answer

<https://forms.gle/yy3NXtMfXxJESzzR9>

- How many seconds do you think that was?
- Ask your neighbor how long they thought. Enter the average of your two numbers

Results

To find out how accurate time perception is, averaged people together

- We found out that for the average person here, today, it was _____
- If we had taken just number

Sources of individual differences

- Stable
- Temporary (day, month, year)

Sources of individual differences

- Stable
- Temporary (day, month, year) vs. stable
- Motivation
 - Stable
 - Temporary: To do well in that particular study, or on that day
- Understood instructions versus didn't

Sources of individual differences

- Continuum, neurodiversity
- What is the “normal range”?
 - No objective answer usually
 - Clinicians have to define it in terms of impairment of culturally-expected functioning
