

Attention Lecture 4

Alex Holcombe

2026-08-24

Individual differences

- What do we know?
 - You're going to be disappointed

Demonstration: studying humans requires getting lots of data

- Data is noisy
- Need multiple humans or lots of trials

Time perception mini-study

Give your answer

<https://forms.gle/yy3NXtMfXxJESzzR9>

- How many seconds do you think that was?
- Ask your neighbor how long they thought. Enter the average of your two numbers

Results

To find out how accurate time perception is, averaged people together

- We found out that for the average person here, today, it was _____
- If we had taken just number

Sources of individual differences

- Stable
- Temporary (day, month, year)

Sources of individual differences

- Stable
- Temporary (day, month, year) vs. stable
- Motivation
 - Stable
 - Temporary: To do well in that particular study, or on that day
- Understood instructions versus didn't

Sources of individual differences

- Continuum, neurodiversity
- What is the “normal range”?
 - No objective answer usually
 - Clinicians have to define it in terms of impairment of culturally-expected functioning
